### **CLOUDSHIELD® AND PROLEXIC TEAM TO DEVELOP NEXT-GENERATION SECURITY SOLUTIONS**

*Partnership enables Prolexic to expand business opportunities and quickly bring innovative new security solutions to market by developing on the CloudShield CS-2000 Platform*

**SUNNYVALE, Calif. — December 13, 2004** — CloudShield® Technologies, Inc., the leader in **high performance** open platforms for network security and content analysis applications, and Prolexic Technologies, Inc., a leading provider of Denial of Service solutions and security consulting services, today announced a partnership to develop and deliver advanced network security solutions using CloudShield's open platforms. Under the terms of the agreement, CloudShield and Prolexic will work jointly to expand Prolexic's network security applications offering and complement Prolexic's Border Defense Suite.

The new network security applications will be developed on the CloudShield CS-2000, an open platform specifically designed for network (packet processing) applications and services. The modular CS-2000 combines one or more programmable Deep Packet Processing Modules which provide the computing capacity and resources to perform complex packet operations in real-time, with a Pentium-based Linux server module for system and application management operations. Together these components provide 100% traffic visibility with complete packet analysis, transformation, and control for high-speed high-demand network applications.

"The CS-2000 opens application and business opportunities for Prolexic that complement our existing Border Defense Suite product line," said Darren Rennick, CEO of Prolexic Technologies. "CloudShield's platform provides the performance and the flexibility we require to ensure that we are able to quickly and effectively meet our customers' constantly evolving security needs."

"We are delighted Prolexic has selected the CS-2000 for their service delivery platform," said Rusty Cumpston, president and CEO of CloudShield Technologies. "We look forward to working with Prolexic and enabling them to grow their business and meet the needs of their customers."

#### **About Prolexic**

Prolexic Technologies is the worldwide leader in DDoS mitigation. More companies and Service Providers entrust their networks to Prolexic for DDoS protection than any other internet security company in the world. Leveraging unique filtering techniques, high-speed bandwidth and peering, advanced routing, and other patent-pending devices, Prolexic has created the most powerful DDoS detection and protection system on earth. Consequently, Prolexic has demonstrated success in monitoring, filtering, and routing massive traffic flows, often shouldering multi-gigabit-per-second distributed attacks for its customers. Prolexic's solution can be easily implemented into networks of all sizes, often with little or no infrastructure investment. Learn more about the product and services offered by Prolexic at [www.prolexic.com](http://www.prolexic.com).

#### **About CloudShield**

CloudShield Technologies provides high performance open platforms for network security and content analysis applications and services. With CloudShield platforms, end-users and partners have rapidly developed and deployed network applications and solutions that require complete

traffic visibility and deep packet inspection for high-speed, high-volume networks. More information about CloudShield can be found at [www.cloudshield.com](http://www.cloudshield.com).
