## **CloudShield Technologies Announces Record Q3 Growth**

*Company more than doubles bookings*

**SUNNYVALE, Calif., November 10, 2008** – [CloudShield](#) Technologies, Inc., a leading provider of service management and infrastructure security solutions, today announced record Q3 growth. CloudShield achieved a more than 100% increase in bookings compared to Q3 of 2007. Q3 2008 also marks the largest revenue generated by both the Federal and Service Provider sales teams since the company's inception.

“We are excited about our momentum and will continue our goal of providing innovative security and management solutions to our expanding customer base,” said Matt Jones, CEO of CloudShield. “As the technological landscape becomes more complex, government agencies and service providers need to identify new ways to manage high-bandwidth IP-based data services. The increasing demands of Peer-to-Peer (P2P) file sharing, steaming videos and other services on existing infrastructure are driving the sales of our solutions and creating the need for new partnerships.”

The company's growth comes on the heels of a September announcement that its [DNS Defender](#) and [Subscriber Services Manager \(SSM\)](#) applications are available on the new IBM BladeCenter PN41 blade. CloudShield also recently announced the availability of the [CloudShield Packet Operating System \(CPOS\)](#), a packet processing operating system that reduces the cost and environmental impact of implementing high-traffic converged IP networks. In addition, during Q3, the company opened a new office in Herndon, VA, stemming from its growth

in the Federal government sector to help government agencies tackle their toughest security and network policy enforcement challenges.

CloudShield is a private company that sells to the world's largest service providers and national governments through its partners, including: Alcatel Lucent, IBM, L-3 Communications and Northrop Grumman. CloudShield's unique high-speed network platform provides unmatched capabilities for network security, cross domain solutions, content management and network policy enforcement functions.
