Dynamic Network Services Deploys CloudShield CS-2000

Provides enhanced network protection and visibility

SUNNYVALE, Calif., December 16, 2008 – [CloudShield](#) Technologies, Inc., a leading provider of service management and infrastructure security solutions, today announced that [Dynamic Network Services Inc.](#) has deployed its [CS-2000](#) network application platform.

“We have deployed the CloudShield CS-2000 system and are utilizing its Deep Packet Inspection (DPI) technology to inspect, analyze, control and defend our network,” said Tom Daly, president and CTO, Dynamic Network Services. “The flexibility of CloudShield’s solution allows us to cost effectively implement these capabilities on a single network application platform. We are now able to offer a more robust service to our network customers.”

The CS-2000 content processing platform is a compact, modular, high-speed network platform capable of handling a wide range of applications and multiple functions simultaneously. Its high-capacity and wide range of interface support make it suitable for roles in the aggregation network, in the core or at interconnect points.

“It is critical to the success of any business with an online presence that their services are reliable,” said Matt Jones, CEO of CloudShield. “The CS-2000 provides Dynamic Network Services with increased infrastructure security and traffic visibility to ensure its customers are always protected online.”

CloudShield is a private company that sells to the world's largest service providers and national governments through its partners, including: Alcatel Lucent, IBM, L-3 Communications and Northrop Grumman. CloudShield's unique high-speed network platform provides unmatched capabilities for network security, cross-domain solutions, content management and policy enforcement for network bandwidth.

About CloudShield

CloudShield provides services management and security solutions to service providers and national governments worldwide. The company's deep packet inspection platform and applications enable customers to inspect, analyze and control all network traffic, lowering costs, securing infrastructure and generating new revenue streams. Working closely with its partners, CloudShield has deployed solutions throughout North America, Europe and Asia. More information about CloudShield can be found at: <http://www.cloudshield.com/>.

About Dynamic Network Services Incorporated

Founded in 1998, originally as a free DNS service for the Perl and open source communities, Dynamic Network Services Incorporated has grown quietly and steadily to become one of the Internet's largest and most reliable providers of domain, zone and email solutions, through its innovative and well supported services. Still offering its signature free service, the company today plays a key role in keeping the Internet's DNS infrastructure at large running smoothly and stays faithful to its core values of engineering excellence. Additionally, Dynamic Network Services also offers Dynect, an enterprise class dynamic DNS offering.
